

I am an electric car enthusiast who has owned and driven a battery-electric car since 2013. I now enjoy speaking about the benefits of EV ownership to clubs such as Rotary, Lions and Probus. I've also had the pleasure of speaking at schools, churches and private clubs, addressing some of the myths and misconceptions about electric cars.

We are at the beginning of a revolution in the auto industry... electric cars and driverless vehicles will begin to have a profound effect on society in the very near future.

If you think a presentation about daily life behind the wheel of an EV would be of interest to your group, I would be pleased to share my experience and knowledge.

A few details about the talk:

1. It is informal, not highly technical, PowerPoint format, open for Q & A
2. The talk centres on Tesla but touches on EV history, battery tech, autonomous driving etc.
3. 25 minutes long plus 15 minutes for Q & A (will adjust the content / length to fit your agenda)
4. I have a data projector and portable sound system if required
5. Of course the talk is free (I'm not connected to ANY company and have nothing to sell, this is simply a hobby and a passion of mine)
6. I live in Carlisle (north of Waterdown) and am willing to travel reasonable distances to speak.
